

TOOLS FOR EASY PDB DATA VALIDATION AND DEPOSITION

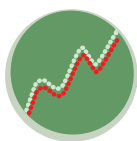

pdb_extract

pdb-extract.wwpdb.org

Quickly assemble accurate PDBx/mmCIF data files

- Extracts statistics from the output files produced by >35 software programs for X-ray and NMR protein structure determination
» Including REFMAC, PHENIX, BUSTER-TNT
- Assembles specific details about your experiment and experimental model
- Supports multiple MTZ file conversion
- Creates a complete PDBx/mmCIF file ready for validation and deposition
- Enables easy submission of multiple structures. Use the same author information template to generate files for related structures
- Visit pdb-extract.wwpdb.org to use the online server or download the latest workstation version.

SF-Tool

sf-tool.wwpdb.org

Convert structure factor data files

- Easily translate your structure factor file between different formats (mmCIF, MTZ, CNS/CNX, XPLOR, SHELX, TNT, HKL2000, SCALEPACK, D*Trek, SAINT, or OTHER format)
- Check for twinned or detwinned data
