

# Exploring Integrative Structures with **RCSB.org**

Brinda Vallat

RCSB Protein Data Bank

Institute for Quantitative Biomedicine

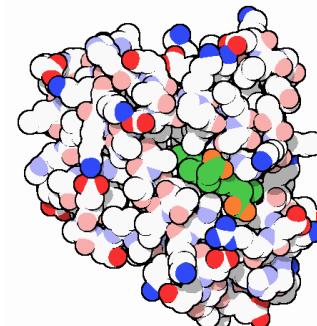

Rutgers, The State University of New Jersey, USA

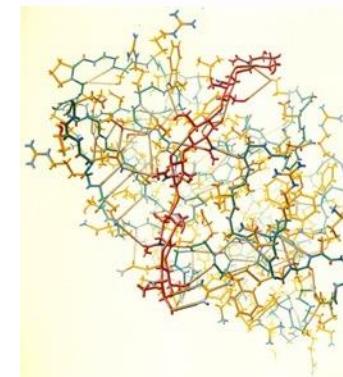

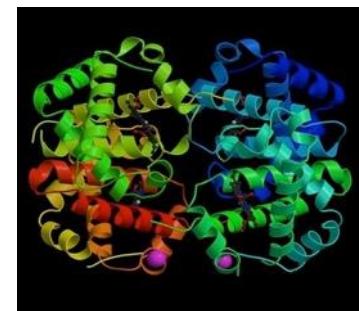

# The Protein Data Bank

- Single global repository for experimentally determined structures of biological macromolecules and their complexes
- Established in 1971 with seven structures, currently holds ~250,000 structures
- First open access digital resource in biological sciences
- FAIR resource: *Findable, Accessible, Interoperable, and Reusable* data
- wwPDB collaboration: RCSB PDB (US), PDBe (Europe), PDBj (Japan), PDBc (China), BMRB, and EMDB

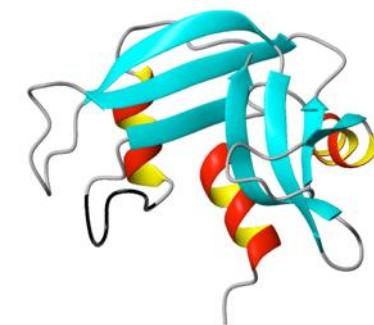

Myoglobin

Hemoglobin

Lysozyme

Ribonuclease

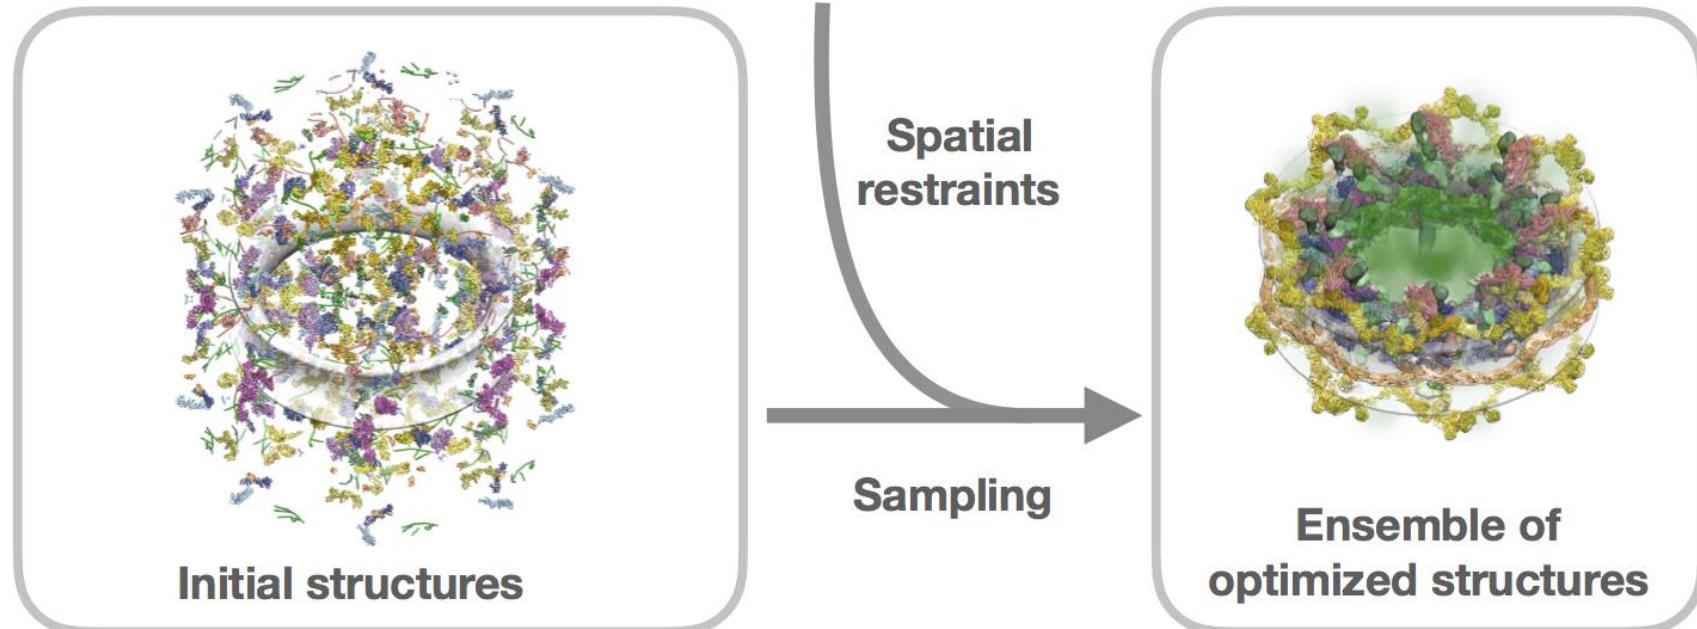

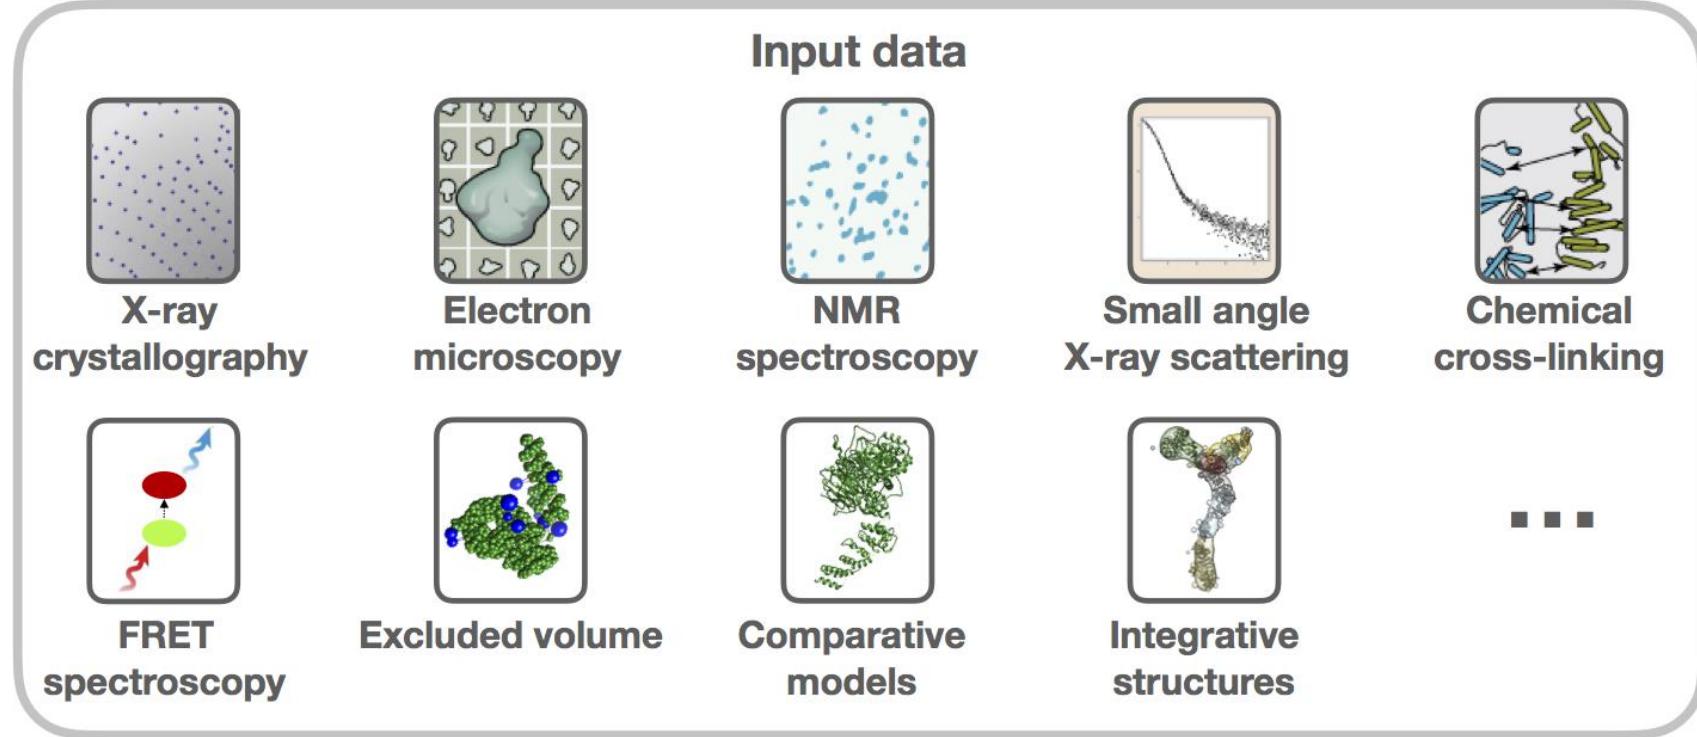

Structures that Inspired Launch of the PDB

# PDB Archives Structures of Macromolecules

- Structures from X-ray Crystallography, Nuclear Magnetic Resonance (NMR) Spectroscopy, and Three-Dimensional Electron Microscopy (3DEM)
- Atomic coordinates and metadata
- Multi-method structures based on X-ray, NMR, and 3DEM
  - X-ray + Neutron Diffraction
  - X-ray + Solution NMR
  - X-ray + Solid-state NMR
  - Solution NMR + Small angle scattering
  - 3DEM + Solid-state NMR
  - 3DEM + Small angle scattering

# Integrative Structure Determination

Vallat B et al. 2018. *Structure*.  
26, 894-904

Rout MP & Sali A. 2019. *Cell*.  
177, 1384-1403

# Challenges in Archiving Integrative Structures

- Restraints from different experiments (Crosslinking, Hydrogen-Deuterium Exchange (HDX), Mass Spectrometry (MS), Small Angle Scattering (SAS), Forster Resonance Energy Transfer (FRET), etc.)
- Multi-scale, multi-state, and ordered models
- Conformational ensembles and models with heterogeneous composition
- Starting models from experimental or computational methods
- Different modeling methodologies and software applications

# wwPDB Integrative/Hybrid Methods Task Force

EMBL-EBI, Hinxton, October 6-7, 2014

# Summary of Recommendations

- Archive structural models, data, metadata, and workflows
- Adopt flexible model representation
- Assess structural model uncertainty
- Federate archives for structural models and experimental data
- Establish publication standards

Structures of biomolecular systems are increasingly computed by integrative modeling that relies on varied types of experimental data and theoretical information. We describe here the proceedings and conclusions from the first wwPDB Hybrid/Integrative Methods Task Force Workshop held at the European Bioinformatics Institute in Hinxton, UK, on October 6 and 7, 2014. At the workshop, experts in various experimental fields of structural biology, experts in integrative modeling and visualization, and experts in data archiving addressed a series of questions central to the future of structural biology. How should integrative models be represented? How should the data and integrative models be validated? What data should be archived? How should the data and models be archived? What information should accompany the publication of integrative models?

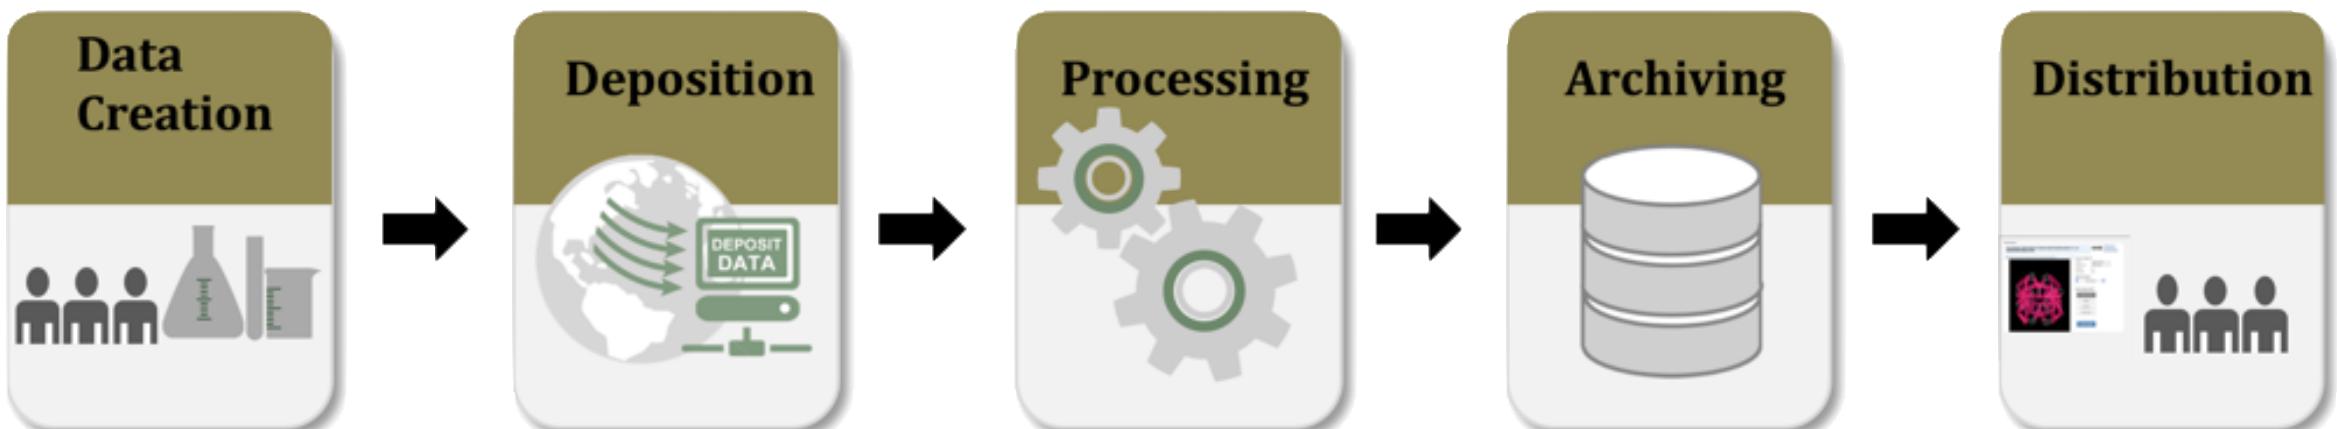

**Background**  
**Historical Rationale for the Workshop**  
The PDB (<http://www.pdb.org>) was founded in 1971 with seven protein structures as its first holdings ([Protein Data Bank](#), 1971). The global PDB archive now holds more than 100,000 atomic structures of biological macromolecules and their complexes, all of which are freely accessible. Most structures in the PDB archive (~100,000) were determined by X-ray crystallography, with the remainder contributed by two newer 3D structure determination methods, nuclear magnetic resonance (NMR) spectroscopy and 3D electron microscopy (3DE). Considerable effort has gone into understanding how to best curate the structural models and experimental data produced with these methods. Over the past several years, the Worldwide PDB (wwPDB; the global organization responsible for maintaining the PDB archive) ([Berman et al., 2003](#)) has established expert, method-specific task forces to advise on which experimental data and metadata from each method should be archived and how this data and the resulting structural models should be validated. The wwPDB X-ray Validation Task Force (VTF) made detailed recommendations on how to best validate structures determined by X-ray crystallography ([Read et al., 2011](#)). These

# Archiving Integrative Structures

# Archiving Requirements

- Data standard
  - Primary requirement that enables automated data processing and dissemination of data in a standard form
- Software tools that support the data standards
- Data pipeline for deposition, processing, archiving, distribution

Data Standards  
Deposition Tools

Biocuration  
Validation

Vallat B et al. 2018. Structure. 26, 894-904

# Data Standard: PDBx/mmCIF

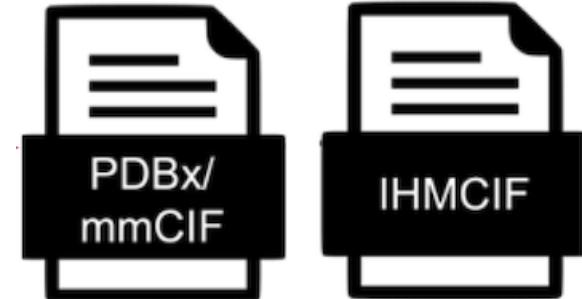

- Data standard for the PDB used for archiving experimental structures of macromolecules
- Standard definitions for
  - Chemistry of polymeric macromolecules and small molecules
  - Atomic model coordinates
  - Supporting metadata: source organisms, samples, authors, citations, software
  - Reference sequence and chemical information
- Extensible to support evolving methods
- Software tools to read, write, and check compliance
- <http://mmcif.wwpdb.org>

# Data Standard: IHMCIF

- IHMCIF: Extension of PDBx/mmCIF
  - Data standard for integrative structures
  - Existing definitions from PDBx/mmCIF are used
  - New definitions required for integrative modeling are in IHMCIF
    - Multi-scale, multi-state, ordered states, ensembles
    - Compositionally heterogeneous assemblies
    - Experimental restraints, starting models, modeling workflows
    - Information regarding related data residing in external resources
  - <https://github.com/ihmwg/IHMCIF>
- Python-IHM: Software tool that supports IHMCIF
  - Provides a mechanism to programmatically generate mmCIF files compliant with IHMCIF
  - <https://github.com/ihmwg/python-ihm>

# PDB-IHM System for Archiving Integrative Structures

A system for deposition, processing, archiving, and distribution of integrative structures available at <https://data.pdb-ihm.org/>

- The data standards for PDB-IHM are provided by IHMCIF
- Data deposition and processing system based on DERIVA scientific asset management platform (<http://isrd.isi.edu/deriva>)

Vallat B et al. 2025. J. Mol. Biol. 437, 168963  
Vallat B et al. 2021. Acta D. 77, 1486-1496  
Burley SK et al. 2017. Structure. 25, 1317-1318  
Schuler RE et al. 2016. IEEE eScience, 31-40

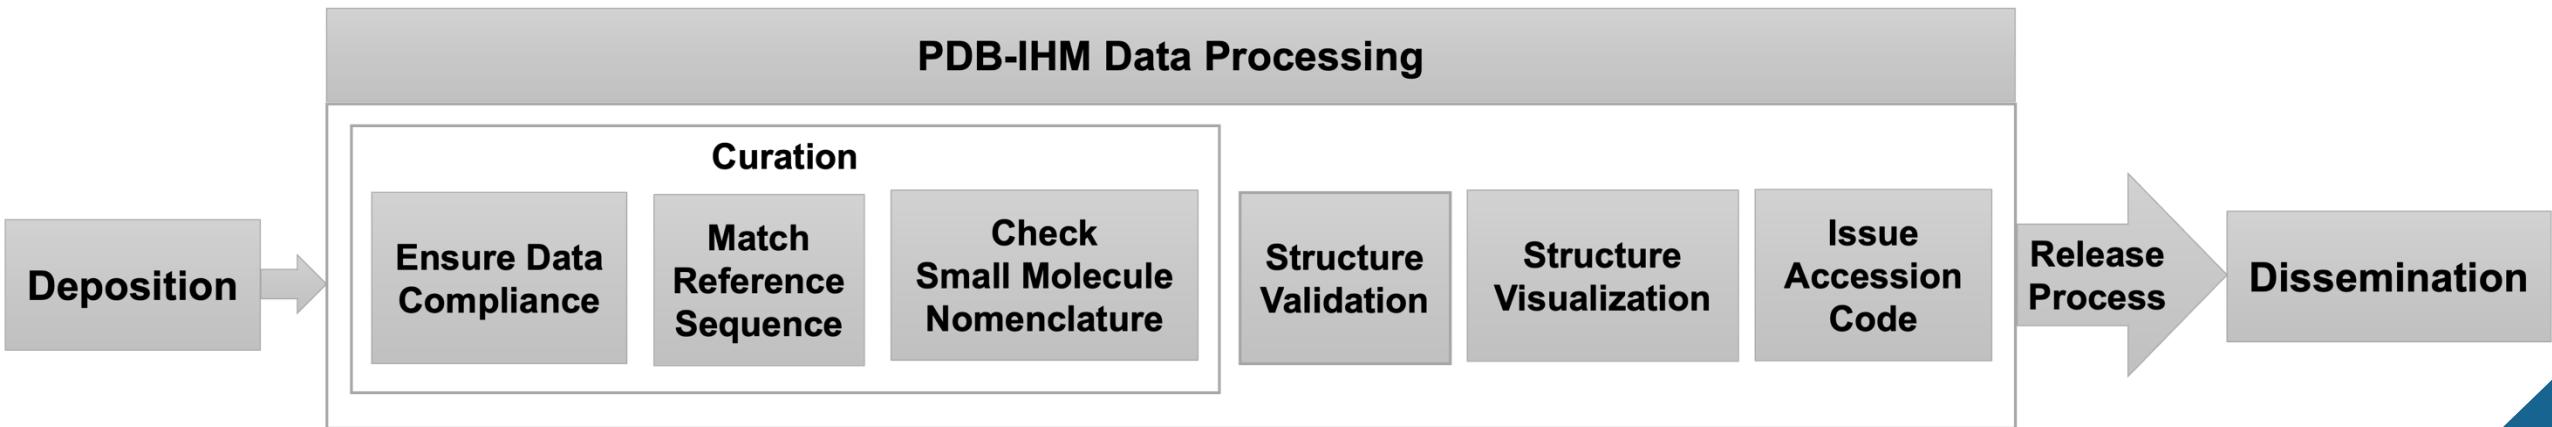

# Deposition Guidelines

- IHMCIF compliant files
  - Molecular system representation and model coordinates
  - Spatial restraints, starting models, modeling protocols
  - External references: Sequences, chemical moieties, related data
  - Metadata: Authors, citations, software
- Compliant files can be created prior to deposition (e.g., using python-ihm) or using the data harvesting section of the deposition workflow
- Deposition API supports submission of a *collection* of structures belonging to a single investigation or publication

<https://data.pdb-ihm.org>  
helpdesk@pdb-ihm.org

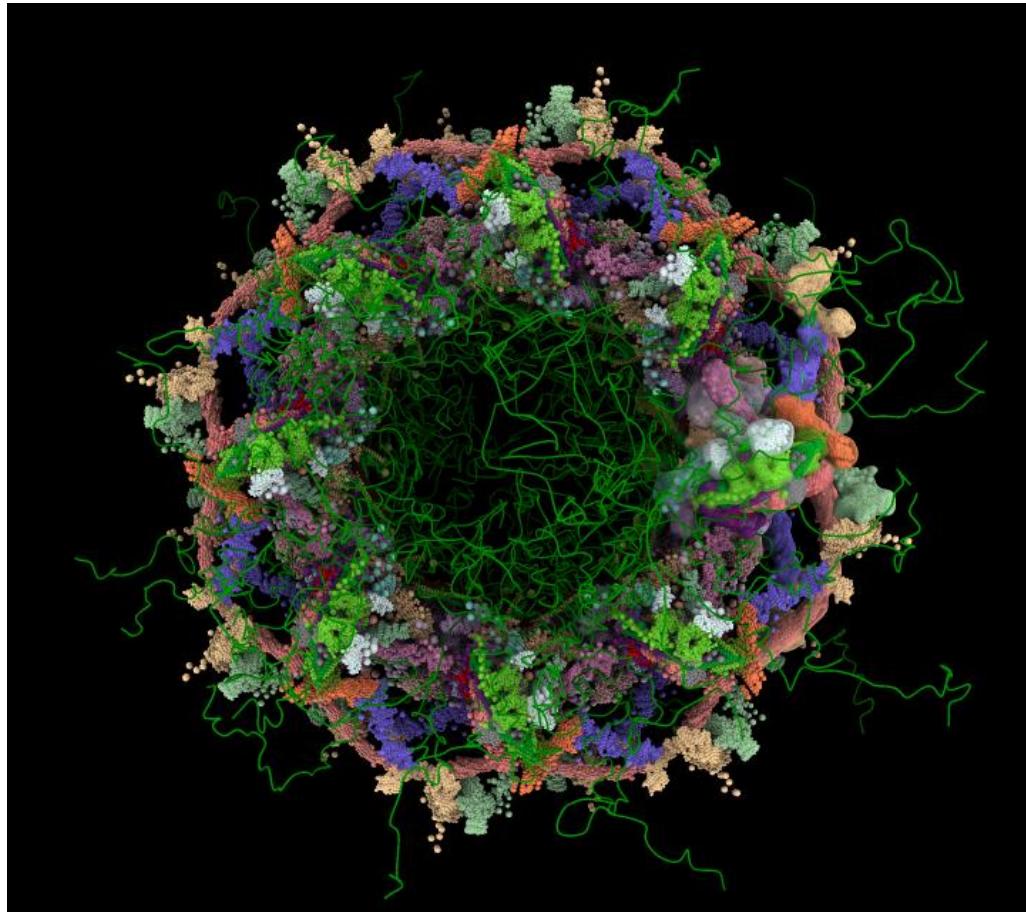

# Biocuration Pipeline

- Data consistency and completeness
- Compliance with PDBx/mmCIF and IHM-CIF
- Reference sequence and small molecule information
- Model visualization
- Accession code issue
- Validation report generation

# Visualization of Integrative Structures

8ZZC: Integrative structure of the nuclear pore complex from budding yeast

# Validation of Integrative Structures

- Based on guidelines and recommendations from the community
- Assessment categories
  - Model composition
  - Data quality assessments
  - Model quality assessments
  - Fit to data used to build the model
- Input Data types
  - Small angle solution scattering
  - Crosslinking-MS
  - 3DEM
- Software integrated with PDB-IHM deposition and curation pipeline
  - Validation reports can be obtained after deposition and used for manuscript review process
  - Summary and full pdf reports are available
- Standalone validation server
  - <https://validate.pdb-ihm.org/>

## Integrative Structure Validation Report •

May 26, 2022 - 08:45 AM PDT

The following software was used in the production of this report:

Molprobity Version 4.4  
ATLAS Version 3.0.3

Integrative Modeling Validation Version 1.0  
Integrative Modeling Platform Version 2.15.0

PDB ID	PDBDEV_0000009
Structure Name	Structure of the human Rev7 dimer
Publication Title	Rev7 dimerization is important for assembly and function of the Rev1/Pol $\zeta$ translesion synthesis complex
Authors	Alessandro A. Rizzo; Faye-Marie Vassel; Nimrat Chatterjee; Sanjay D'Souza; Yunfeng Li; Bing Hao; Michael T. Hemann; Graham C. Walker; Dmitry M. Korzhnev

This is a PDB-Dev IM Structure Validation Report for a publicly released PDB-Dev entry.

We welcome your comments at [pdb-dev@mail.wwpdb.org](mailto:pdb-dev@mail.wwpdb.org)

A user guide is available at [https://pdb-dev-beta.wwpdb.org/validation\\_help.html](https://pdb-dev-beta.wwpdb.org/validation_help.html) with specific help available everywhere you see the ⓘ symbol.

List of references used to build this report is available [here](#).

## Overall quality •

This validation report contains model quality assessments for all structures, data quality assessment for SAS datasets and fit to model assessments for SAS datasets. Data quality and fit to model assessments for other datasets and model uncertainty are under development.

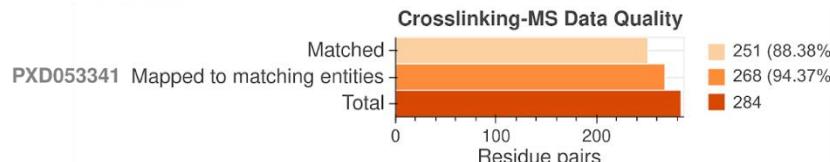

### Model Quality: Molprobity Analysis

IM Structure Validation Report

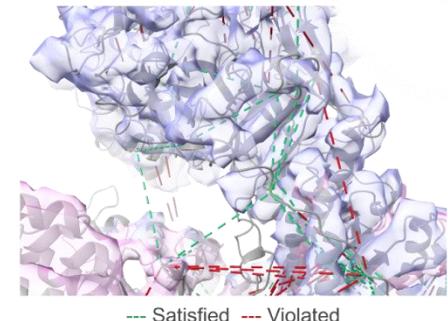

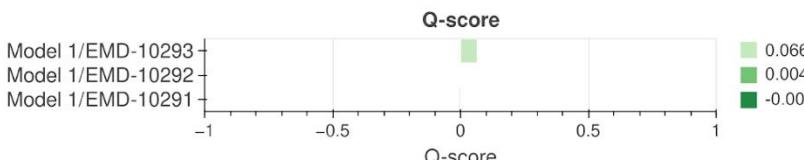

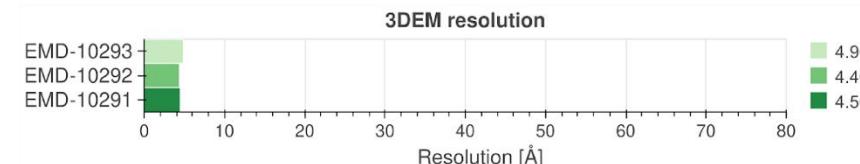

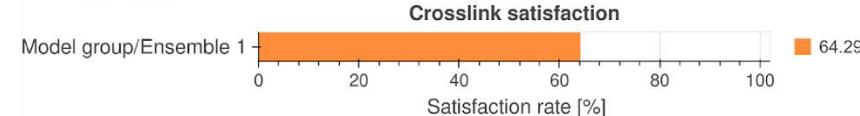

Berman HM et al. 2019. Structure. 27, 1745-1759  
Trewella J et al. 2017. Acta D. 73, 710-728

# Validation Methods: Community Engagement

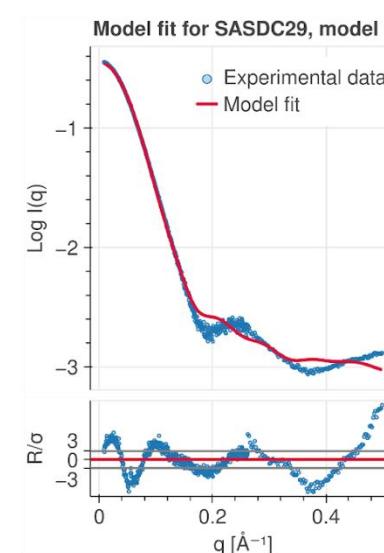

**A 9A8W**

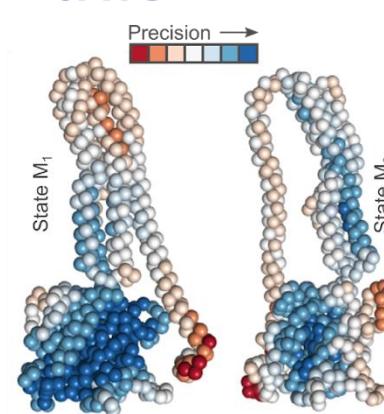

**B 9A0J**

**C 8ZZ9**

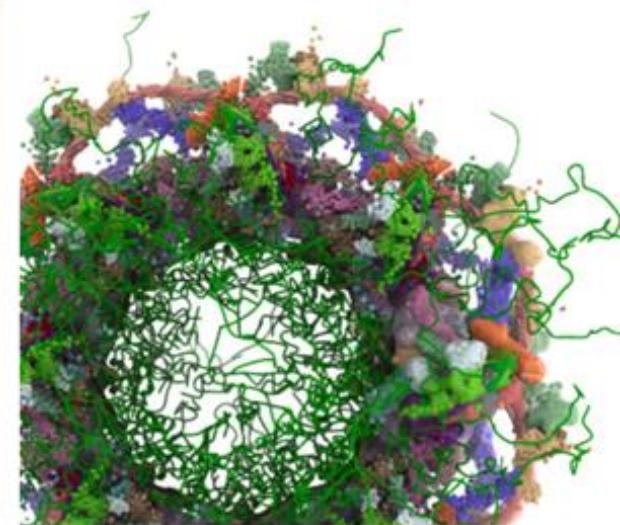

**D 9A1G**

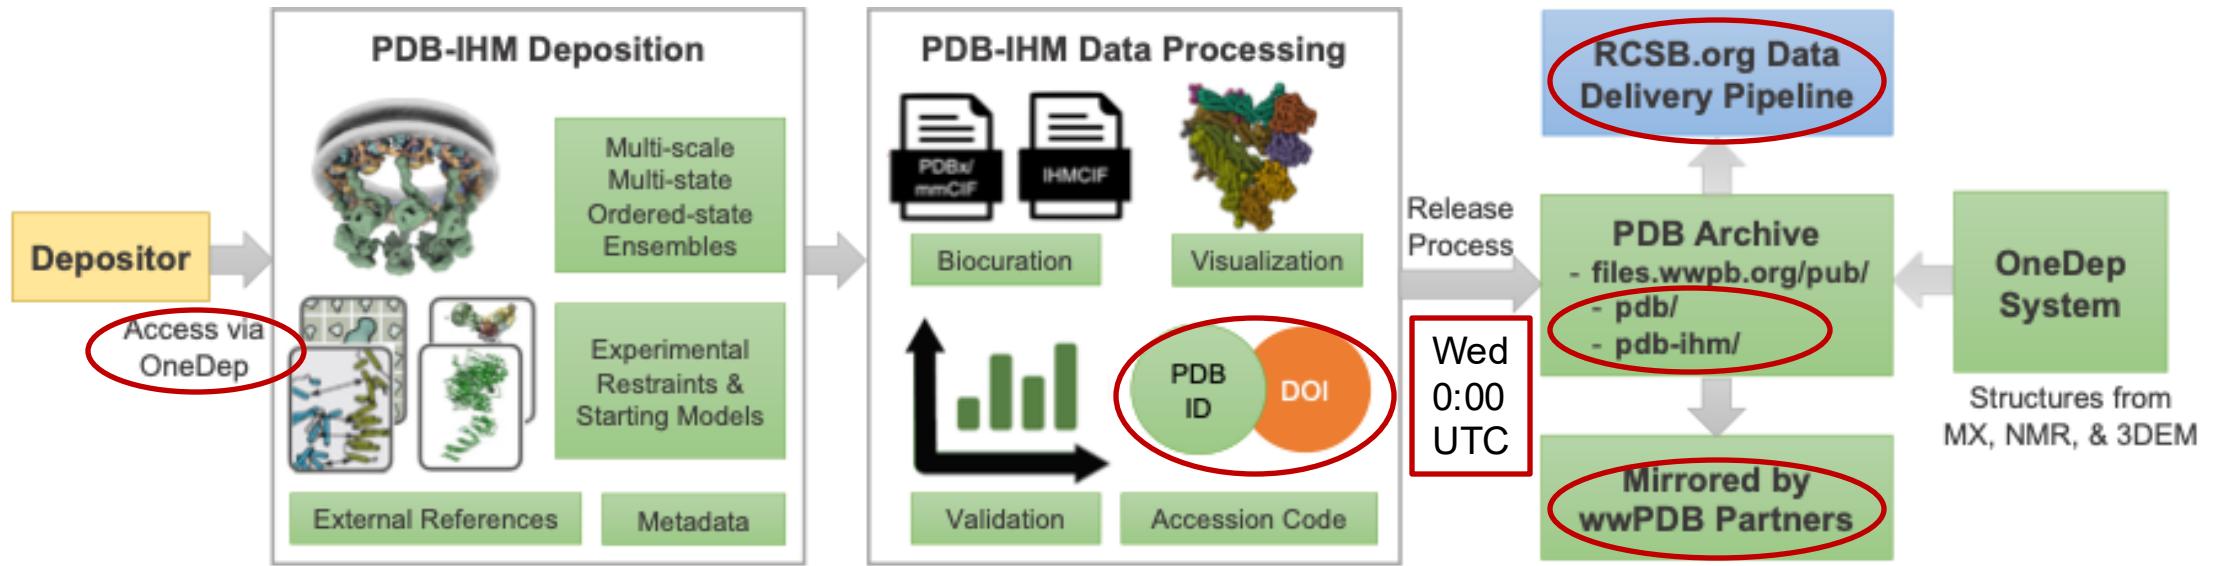

- Support for small angle scattering (SAS), crosslinking-MS, and 3DEM
- 3DEM validation is based on wwPDB standards
- Data exchange with SASBDB and PRIDE for accessing SAS and crosslinking-MS data
- PRIDE Crosslinking supports submission of complete crosslinking-MS datasets
- Collaborations with experts in SAS and crosslinking-MS communities

# PDB-IHM Unification with the PDB Archive and Dissemination on RCSB.org

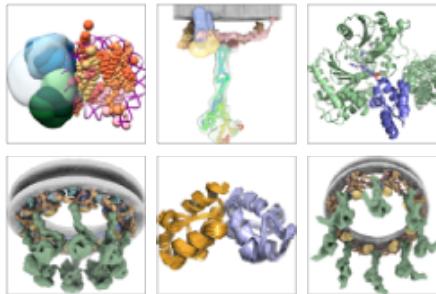

# PDB-IHM: Unification with PDB Archive

- Integrative structures archived alongside experimental structures in the PDB archive
  - wwPDB partners mirror PDB-IHM
  - mmCIF files, validation reports, holdings files
  - ~100K file downloads
- New and existing integrative structures are issued PDB accession codes
  - Synchronized weekly update process
  - Registration of PDB DOIs and creation of wwPDB DOI landing pages
    - Online citations cross-linked to PDB entries via DOIs
  - RCSB.org disseminates integrative structures

# PDB-IHM: Integrated with RCSB.org

## Structures from Integrative and Hybrid Methods (IHM)

3D macromolecular structures integrating data from multiple experimental and computational methods

## Deposition, Biocuration & Validation

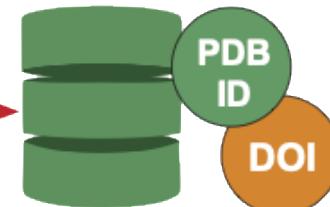

[data.pdb-ihm.org](http://data.pdb-ihm.org)

Community-driven data standards and validation methods supporting flexible model representation and diverse types of input information

## Data Archiving

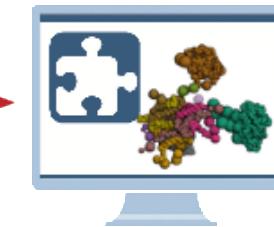

Protein Data Bank

Integrative structures are assigned PDB IDs and DOIs and archived alongside experimental structures

## Data Exploration

[RCSB.org](http://RCSB.org)

Open access to curated data enabling search, visualization, analysis, and download of integrative structures

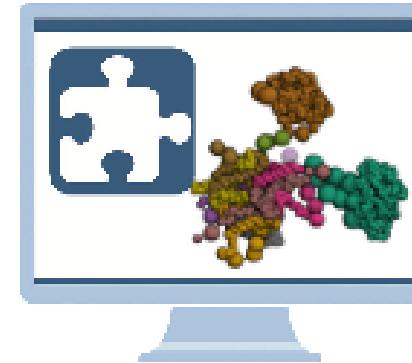

- RCSB.org now supports search, access, analysis, and visualization of integrative structures
- PDB-IHM integration enabled by IHMCIF extension of PDBx/mmCIF data standard

# PDB-IHM at RCSB.org

- Primary and computed data for representative model
- API support across all services
- Attribute-based and scientific searches
- Integrated with Search Results and Structure Summary Pages
- Enabled 3D visualization and annotations, including sequence annotations in 3D
- Incorporated IHM-specific information (*e.g.*, multi-scaling, multi-state modeling, input experimental data and starting models used)

## Data Exploration

**RCSB.org**

Open access to curated data enabling search, visualization, analysis, and download of integrative structures

Peulen T et al. 2023. *Elife*, 12, e79565

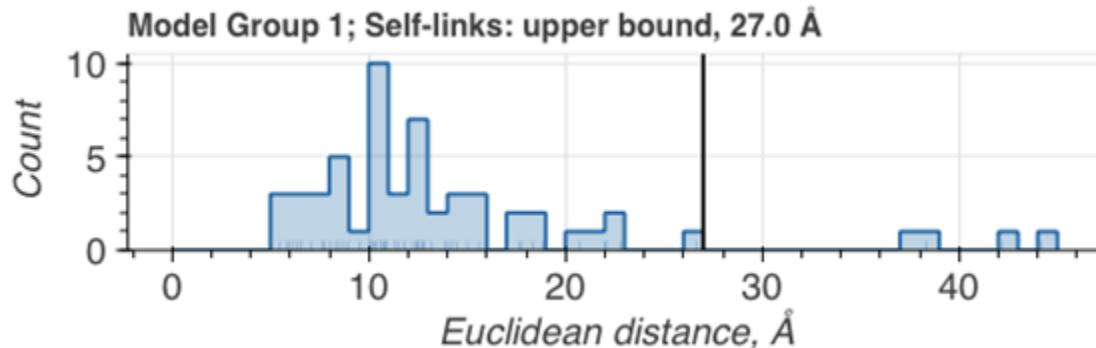

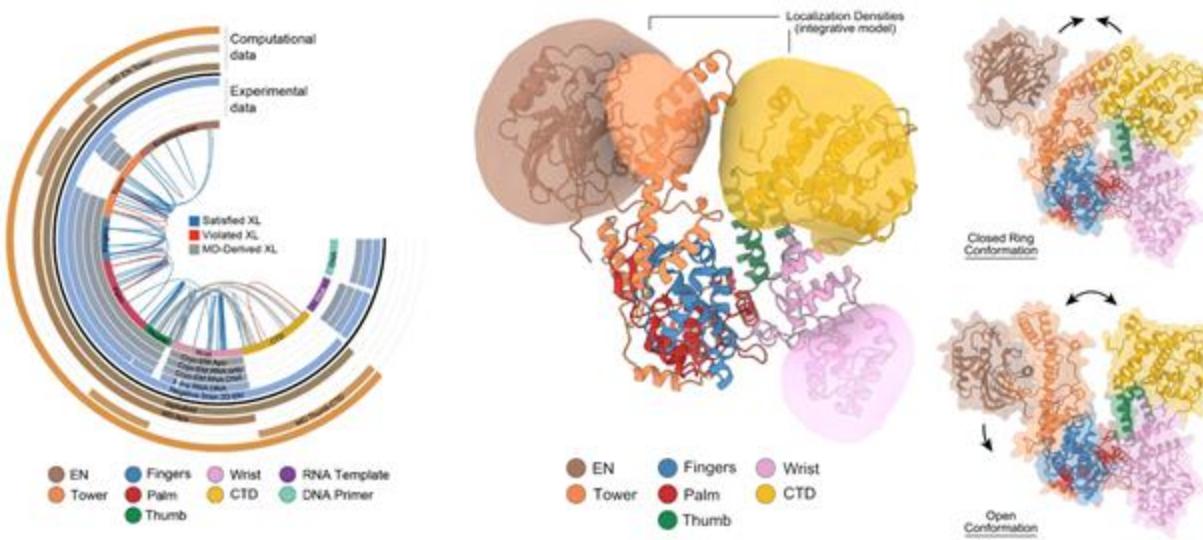

Stahl K et al. 2023. *Nat Biotechnol*. 41, 1810-1819

# Experimental Methods in PDB-IHM

# PDB-IHM: Impact on 3DEM-based Structures

## Integrative structure of the Human LINE-1 ORF2 Protein (9a3q)

- ~25% of low resolution 3DEM structures deposited in the PDB in 2023 are likely integrative structures
- Many of these use crosslinking-MS data and are not annotated appropriately, leading to incomplete data capture
- PDB-IHM provides a robust mechanism for archiving such structures along with complete information
- Enables enhanced structure validation and access to FAIR data

# PDB-IHM: Looking Forward

# Integrative Structures: Looking Forward

- Community engagement to improve deposition
  - Encourage deposition of integrative structures to PDB-IHM
  - Communicate with journals to recommend structure deposition
  - Enhanced deposition practices for 3DEM structures that use additional experimental restraints
- Continue to support evolving integrative modeling methods
- Continue to develop methods for validation
  - Collaborate with other experimental communities
  - Enhance interoperation with other data resources
  - Deliver validation data in software-amenable mmCIF format
  - Develop Bayesian approach for validation
- Create a federated network of interoperating data resources that contribute to integrative structural biology

# Transition to Extended PDB IDs and PDBx/mmCIF File Format

**By 2028**

4-character PDB IDs (e.g. **1abc**) will be fully allocated.  
After that, all new entries will be assigned only extended PDB IDs.

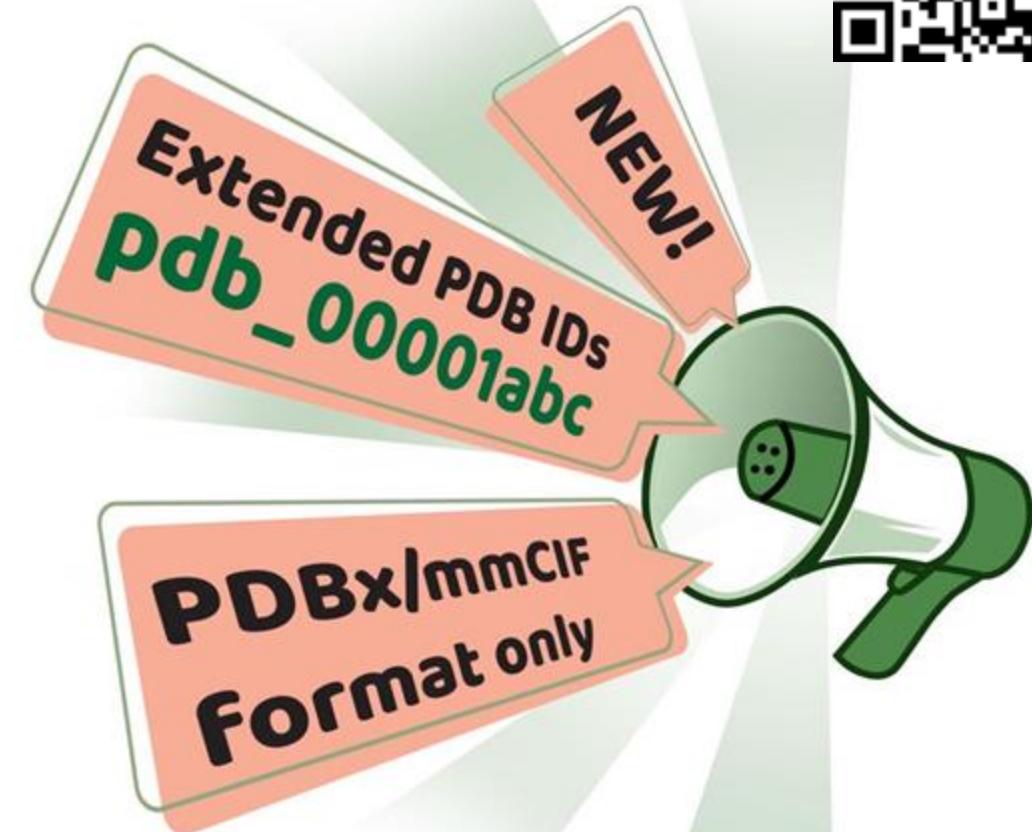

## Extended PDB ID Format

8 alphanumeric characters with prefix *pdb\_*  
e.g. **pdb\_00001abc**

Entries with extended PDB IDs will be available only in PDBx/mmCIF format.

**All PDB users, including software developers, and journal editors must transition to this format.**

Start using extended IDs and PDBx/mmCIF data files today

PDB-IHM entries will also transition to extended PDB IDs

[wwpdb.org/  
documentation/new-format-for-pdb-ids](http://wwpdb.org/documentation/new-format-for-pdb-ids)
